Dumb Homes, Smart People

Creating decentralized systems for the Internet of Things

Amir Chaudhry - @amirmc amc79@cam.ac.uk Smart Homes Conference November 2013

My Smart home!

Current reality

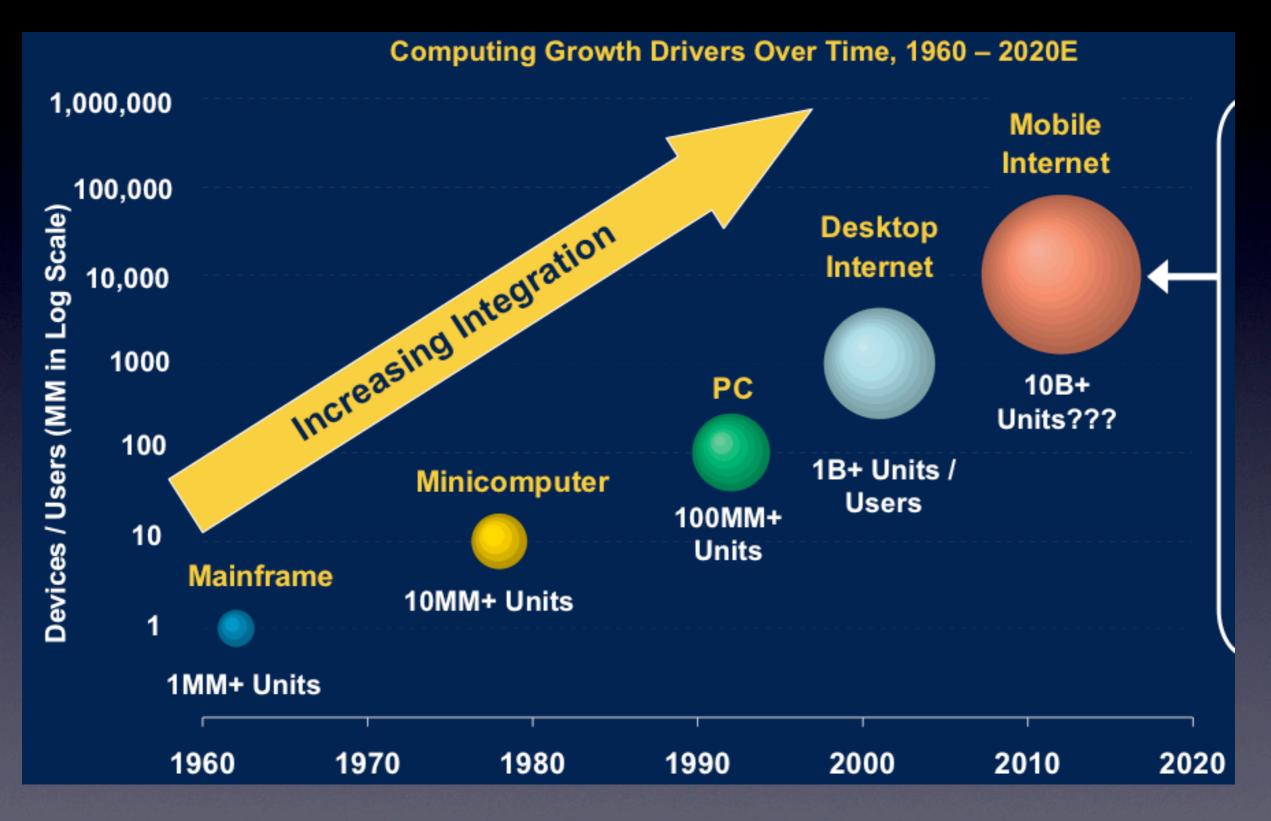

Billions of devices

Internet Trends 2010, Morgan Stanley

Billions of devices

What will devices be running on? How will devices find each other? How will devices sync and store data?

Cloud Computing!

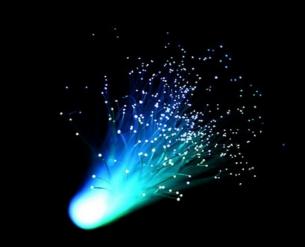

Cloud Feudal Computing!

Cloud Feudal Computing! benefits:

Identity

Connectivity

Storage / Sync

To enable the creation of resilient decentralised systems that incorporate privacy from the ground up so that users retain control of their networks and data

Nymote Toolstack

Ø

Mirage OS (application)

Signpost (Identity / Connectivity)

nymote.org

Irminsule (Storage / Sync)

- Lean, mean, clean-slate OS
- Designed for cloud and embedded devices
- Increased safety and resilience

- Lean, mean, clean-slate OS
- Designed for cloud and embedded devices
- Increased safety and resilience

Answer to "What will devices be running on?"

Nymote Toolstack Signpost

nymote.org

- Stable names for devices (e.g phone.amirmc.io)
- Incorporates security and key management
- Coordinates connectivity across devices

Nymote Toolstack Signpost

nymote.org

• Stable names for devices (e.g phone.amirmc.io)

Incorporates security and key management

Coordinates connectivity across devices

Answer to "How will devices find each other?"

Nymote Toolstack Irminsule

nymote.org

- Distributed Database that never forgets
- Roll back to any point and identify changes
- Push changes easily between devices
