Hands to the pump: total control software

Marcus Fowler

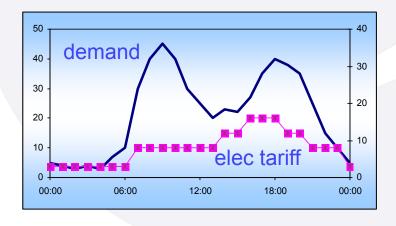

Associate Director, Tynemarch Systems

- Water Companies have to operate their water supply network to meet customer demand at lowest cost.
- How to ensure security of supply?

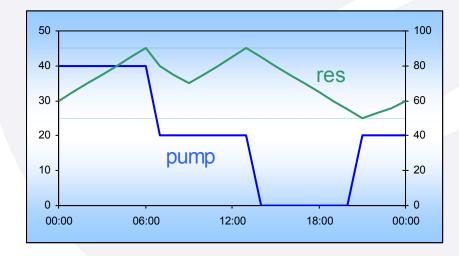

Keep reservoirs full at all times?

Periods of high demand coincide with highest electricity costs

- Forecast the demand know what needs to be supplied and when
- Plan when to refill pro-actively manage service reservoir levels
- Optimise the operation use the most efficient pumps at the cheapest sources at the most cost-effective times

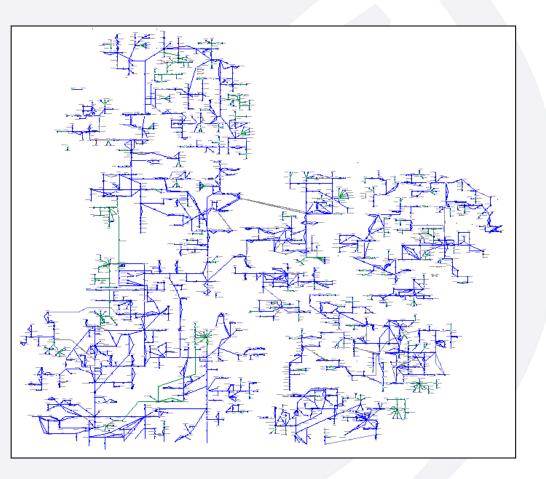

Use storage in the system to offset pumping during the peak electricity tariff periods
